Background

I want to inform you regarding the some of challenges coming across my practice with the person with the schizophrenia like compliance and treatment, education and training, work and employment, family, groups, social, sexual, environmental and regional, coordination with the other health group and care giver, insurance problems, medical, physical, occipital vocational, languages problems mostly how to give opportunities with the schizophrenia and many more to be come in future

Materials and methods

I keep the records with me since I join the medical college and my during practice but this is a really challenging to calm down for question with their relatives and care givers.

Results

It is always to see the experience of the other people including self help groups in this regards and most challenging with near by perfect action and required more interaction with the rehabilitation groups because some are social problems.

Discussion

There is big challenge in this groups to rehabilitation for the person s with chizophrenia as multifactor involvement s are there in this groups with early intervention and long term rehabilitation so that we can produced many the person with schizophrenia in to fruitfully working population as it will required the more interaction among the society and care giver working in this field as we are not able to achieve rehabilitation up to 50% till now.
